

Employee Attrition Analysis: Business Insights & Recommendations

1. Executive Summary

During my time analyzing the HR data, I focused on understanding why 237 of our 1,470 colleagues have left the company recently. A 16.12% attrition rate is significant, and my assessment suggests that much of this stems from heavy workloads and the initial hurdles new hires face during their first few months. I believe that by addressing these onboarding gaps and re-evaluating how we distribute tasks, we can create a more supportive environment where people feel they can grow long-term. I've outlined some practical steps in this report that I think could really help improve our retention numbers.

2. Key Data Findings

The interactive dashboard revealed several critical patterns driving employee departures:

The Overtime Burden: As seen in "visualisation 1.1", a staggering **54% (127 employees)** of all departures consisted of employees who regularly worked overtime.

visualisation1.2

The Work-Life Balance Paradox: Counterintuitively, the highest volume of attrition did not come from employees with a "Bad" work-life balance. "visualisation 1.2" shows that the overwhelming majority of departures (over 120 employees) rated their work-life balance a "3" (Better).

Dashboard

Early Tenure Flight Risk: The "Attrition Trend by Experience" visual ("Dashboard") demonstrates a massive spike in attrition during the first 1 to 5 years of employment, heavily peaking around the 1-2 year mark before tapering off.

High-Risk Job Roles: Laboratory Technicians (62 departures), Sales Executives (57), and Research Scientists (47) account for the vast majority of turnover. Furthermore, many of these employees reported high Job Satisfaction (levels 3 and 4) right before leaving.

Commute and Travel Fatigue:

visualisation1.3

"visualisation 1.3" reveals noticeable commute fatigue spikes around the 9-mile and 24-mile distances.

visualisation1.5

"visualisation1.5 " shows that while "Travel Rarely" makes up the highest raw volume of departures (156), employees who "Travel Frequently" still represent a highly disproportionate flight risk (69 departures) relative to their smaller overall headcount.

3. Strategic Recommendations

A. Workload Management & Burnout Prevention

- **Finding:** 54% of departing employees worked overtime, and frequent business travelers exhibit elevated turnover risk.
- **Impact:** Relying heavily on overtime and frequent travel to meet business goals is actively causing burnout and pushing valuable talent out the door.
- **Action:** Implement a strict overtime monitoring system to flag departments exceeding standard hours. HR should work with department heads in R&D and Sales to cross-train employees, hire temporary support for peak seasons, and re-evaluate how frequent business travel assignments are distributed to prevent traveler fatigue.

B. Revamping the First 24 Months (Onboarding & Integration)

- **Finding:** The highest concentration of attrition occurs during an employee's first 1 to 5 years, with a sharp peak around year 1 and 2.
- **Impact:** The company is losing a massive return on investment (ROI) in recruiting and training because new hires are leaving before they reach peak productivity.
- **Action:** Overhaul the onboarding process to extend beyond the first 90 days. Implement a structured "First Year Mentorship" program and conduct formal check-in interviews at the 6-month, 12-month, and 18-month marks to address misalignment in job expectations and ensure new hires feel supported.

C. Retention Strategies for "Satisfied" Employees

- **Finding:** High attrition is occurring among Laboratory Technicians and Sales Executives who report having "Better" work-life balance and "High" job satisfaction.
- **Impact:** Favorable scheduling and good day-to-day management are not enough to retain talent if foundational needs are lacking. These employees are likely leaving for external reasons, such as market-rate compensation or better job titles.
- **Action:** Conduct a comprehensive market salary review specifically for Laboratory Technicians and Sales Executives. Additionally, implement clear, transparent career progression roadmaps so these employees know exactly what metrics they must hit to earn their next promotion without having to leave the company to get it.
